

# Stainless Steel Inserts Installation Instructions

**IMPORTANT:** Read entire page before beginning.

Congratulations on purchasing the finest stainless steel bumper inserts made. These are hand polished before wrapping.

Once plastic seals are broken, there are no refunds. The plastic is thick for protection of the letters. They are mirrored finished when removed.

1. Clean with alcohol or other wax-free cleaner, acetone is best, but be careful in area of application after vehicle is washed. (This is also for plastic emblems.) Make sure vehicle is 100% dry.
2. Before removing 3M tape backing, trial fit for desired positioning.
3. On scoops, inserts go directly over the black plastic inserts on your Mustang, except the 99-03 regular Mustang and 99-00 GT which you remove hood insert and place directly on vehicle. On 01-03 GT you must remove hood scoop from vehicle to put on insert. All side vents go directly over black plastic.
4. See contour of bumper and on some letters you may want to *slightly bend* to fit contour of bumper.
5. Remove 3M backing, don't touch adhesive, and press on.
6. Make sure it is straight and in correct position because once applied it is almost impossible to remove without ruining letters.
7. Do not polish or wash car and try to avoid rain for 3 days if possible. Optimum strength is achieved after 72 hours. Hot climates shorten this time. Do not install on frozen or wet bumpers. Vehicle should be at 70 degrees or hotter. Installing inserts in cold weather voids any guarantee.
8. Apply a coat of polish and wax. The true brilliance will be seen after a coat of polish is put on.
9. We would love to get some pictures of your car with the letters installed. We are constantly changing photos on our website. Email to [info@actionautoaccessories.com](mailto:info@actionautoaccessories.com). Enjoy!
10. Action Auto Accessories is not responsible for faulty installations.
